Cylinder Head Bolts - Don't Reuse, Replace!
Over 300 sets available

TORQUE to YIELD cylinder head bolts are designed to provide maximised clamping loads between cylinder head and cylinder block. Used torque to yield head bolts are permanently stretched and don't provide ample loading.

Every time the cylinder head is removed from the vehicle, ensure you replace torque to yield cylinder head bolts in order to maintain the correct seal between head and block!

5 X 41mm
